## Self-propelled Sorter

Ideal for installing on a self-propelled tomato harvester

The Protec Tomato Colour Sorter 2000 can be installed on a self-propelled tomato harvester. This high-precision machine rejects unsuitable product straight back into the field. The system is provided with self-diagnostic functions that warn at the onset of problems in the rejection, or in the vision, unit. Meaning that during the harvest, the operator will have little intervention.

The Self Propelled Sorter directly separates the tomatoes of the desired coloured tone and removes foreign bodies. Leaving only high-quality tomatoes ready for the next process.

### Machine Spec:

- Vision electronic unit
- Pneumatic ejector unit
- Electronic-pneumatic unit connecting cable
- Wooden box
- Water nebuliser to clean glass

It can be installed also as an 'Excavator'

### Versions:
