## Heavy Duty Auger Waste Press / Compactor.

It can be supplied as a standalone unit that can easily be mounted on a suitable existing stand or a custom built frame over a waste container, with gantries and stairs.

The wet waste from peeling line is squeezed through a static mesh screen. The operator can easily adjust the amount of water removed from the waste by adjusting the pressure of the plate. As a guide, the single screen version is suitable for peelers up to 1,500Kgs per hour and twin screen systems are suitable for peelers up to 3,000Kgs per hour.

The unit comes complete with start/stop control panel. We can integrate a control signal from the peeling line if required. Motor 3.7kW, 3ph.
